

Community outreach on chronic diseases

Introduction:

on Sep 4, 2023, our students conducted an outreach program to an adoptive family living in the rural area of our community,

The purpose of the outreach program was to provide create awareness about the chronic diseases.

participants :-

The family consisted of four members. our group was represented by 10 students.

Activities :-

upon arrival, the students introduced themselves to the family and conducted a needs assessment to identify the specific challenges faced by the family. Taken a report on the health conditions of the family members.

The group provided counselling services to the family members and given knowledge about ^{the} chronic diseases, its cause, prevention and treatment.

Outcome :

The outreach program was a success, and the family expressed their gratitude for the awareness they received. The students provided the family with counselling.

Conclusion:

The outreach program was an important initiative to create awareness about the chronic diseases. The program was successful in providing counselling. We will continue to work towards building a more inclusive and supportive community for all members.
